# INFLUENZA REPORT

2021-22 Influenza Season Week 18 — Week Ending 5/07/2022

LOCAL  
**SUMMARY**

ILI activity level:  
**Minimal**

Weekly hospitalizations:  
**<5**

Weekly ILI rate:  
**2.6%**

Influenza-like Illness (ILI) is defined as fever (temperature of  $\geq 100^{\circ} F$  [ $37.8^{\circ} C$ ]), cough, and/or a sore throat without a known cause other than influenza.

## INFLUENZA ACTIVITY IN DAVIS COUNTY

Influenza activity in Davis County is currently at a *minimal* level. The school absentee rate for Week 18 (6.09%) is higher when compared to the 5-year average (see Figure 1). There were less than five influenza-associated hospitalizations reported in Week 18. Updated influenza-like illness (ILI) rates for this season can be found in Figure 2.

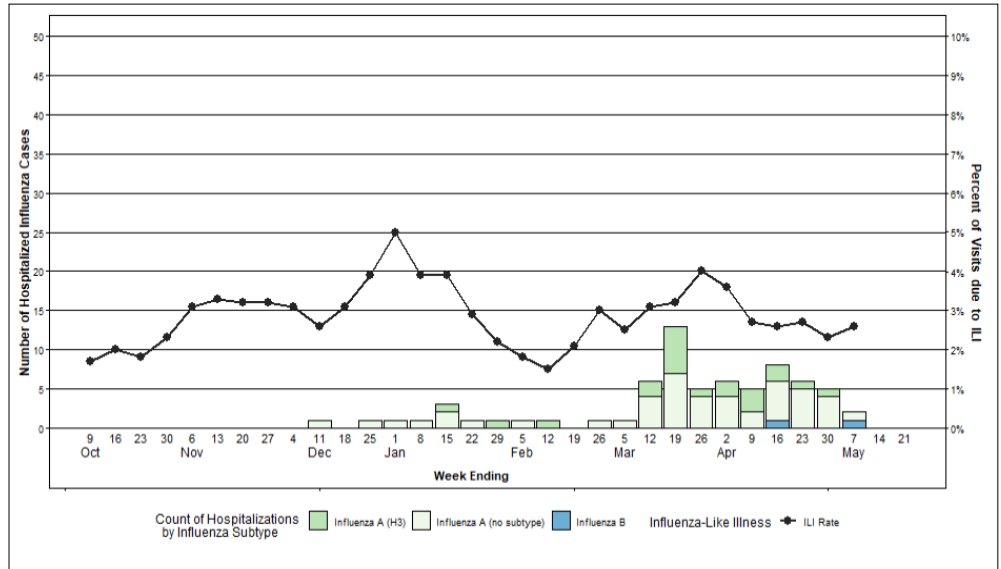

Figure 2. Influenza-like-Illness rate and Hospitalized Influenza Cases, by subtype and admission date, Davis County, 2021-22

## INFLUENZA ACTIVITY IN UTAH\*

Utah's influenza severity was estimated at a *low* level during Week 18. There were 27 hospitalized influenza cases reported during Week 18 in the state of Utah, with a total of 911 hospitalizations so far this season.

Surveillance data for influenza testing in laboratories across Utah indicate that 463 specimens were positive for influenza during Week 18. The predominant virus currently circulating in the community is influenza A (H3N2).

Table 1. Influenza Positive Specimens Tested by Utah Laboratories, 2021-22

Positive Specimens by Type/Subtype	Current Week		Season-to-Date	
	Number	%	Number	%
Influenza A (2009 H1N1)	0	0.0%	0	0.0%
Influenza A (H3)	39	8.4%	1,480	9.5%
Influenza A (no subtype)	420	90.7%	14,005	89.8%
Influenza B	4	0.9%	106	0.7%
<b>Total</b>	<b>463</b>		<b>15,591</b>	

## INFLUENZA ACTIVITY IN THE UNITED STATES\*\*

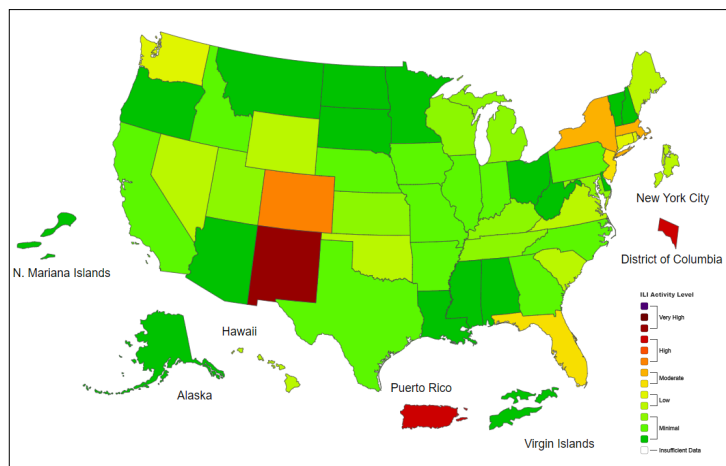

During Week 18 influenza viruses continue to circulate and activity is increasing in parts of the country. Thirty-four states (including Utah) reported *minimal* activity, ten states reported *low* activity, four states reported *moderate* activity, one state reported *high* activity, and one state reported *very high* activity (see Figure 3).

Collaborating clinical laboratories across the United States reported that 8.6% of respiratory specimens tested were positive for influenza in Week 18. Of those, 99.2% were typed as influenza A and 0.8% as influenza B.

In the United States, the number of hospital admissions with laboratory confirmed influenza that were reported to HHS Protect remained stable compared with the previous week. CDC continues to recommend that everyone ages 6 months and older get a flu vaccine as long as flu activity continues. The vaccine this season for the H3N2 viruses identified so far are genetically closely related, but there are some antigenic differences that have developed as H3N2 viruses have continued to evolve.

## VACCINE INFORMATION

CDC recommends that all persons older than 6 months of age receive an influenza vaccine by the end of October.

Flu shots are available at Davis County Health Department at no out-of-pocket cost for those *with* contracted health insurance.

For those *without* insurance:

- Adults (19–49) can receive the flu shot for \$35.
- Adults and Seniors (50+ years) can receive the flu shot for \$70.
- Children and adolescents (<19 years) may receive the vaccine for an \$8 fee.

For additional information, call the Immunizations Hotline at (801) 525-5020.
